Oh - just a quick note that I'll be out December 6th and 7th. But Bill (william) Cooper should be available on those days. I've given him access to everything, including the FTP site, in case I'm not here.

Having fun yet? :)

Jim, Howard and Martin,

It has taken Deb and I a week to figure out where we stood on this and what the best approach would be to quickly get something accurate and functional ready to post. Unfortunately, the SCRIBE database that will ultimately house all the data with appropriate flags is still a substantial way from being ready to utilize for this purpose. So what is being put together in lieu of that is a series of similar spreadsheets- one for Ph I/II, one for Ph 3, one for Ph IV and one for Ph V that will contain the sample number, analytical method and lab, and result with flags for all the analyses. The spreadsheets, once posted, will enable outside parties to manipulate the data. We believe this can be ready to post no later than the end of next week, thanks to extraordinary efforts by Jeff Mosal in EPR and Rick Wilkin in Ada. We still believe that it is important to continue with population of SCRIBE, and that once completed, that would replace the spreadsheets as a useable form of comprehensive data reporting that can be available outside the Agency. But I think it will take a couple more weeks to develop a reliable estimate of the time that will take to complete and QA. In the meantime, we believe this commitment can be reliably met with the spreadsheet approach. Everyone is going full steam ahead with it, so please advise if you have any concerns about this approach. And Tim, a heads up regarding the need to post these quickly once they are ready and Jim has given the green light.

Ayn -- I know you, and probably our contractors are pressed, but it is really, really important that we develop a single document with all of the data and all of the data qualifiers for the various Pavillion investigation phases.

It is getting harder and harder for me to explain that this is not yet done.

Can we expedite this? Do you need more resources?
